Operative comfort
Thanks to cutting-edge ball bearing technology, high precision rotation and fluid dynamic analysis of air flows, the noise emissions of the turbine have been cut by more than one half, to a medium level of 57dB(A),

an almost imperceptible level in normal ambient noise conditions; the benefits are further increased by the prevalent reduction in medium-high frequencies, the largest cause of acoustic discomfort.

LED lighting technology
A miniaturised circuit with a light-emitting diode replaces traditional halogen bulbs. Compared to halogen bulbs, the Led has an incomparably superior life. It also emits a white light, of a higher quality, which does not alter the colour of teeth and tissues.

Push-button bur change
Bur changes are made fast and easy thanks to the push-button release present on the head of all Stern Weber Silent Power Evo models.
